TECHNICAL SKILLS

- Programming Languages: Ruby, JavaScript, HTML, CSS, SQL
- Libraries & Frameworks: Ruby on Rails, RSpec, Minitest, React, Ember.js, Git, Docker
- Proficient in a variety of programming aspects, such as ensuring quality, communication, design patterns, version control, code documentation, code reviews, test-driven development, continuous integration, continuous delivery, and agile project management. Proven experience performing the aforementioned in remote teams.

EXPERIENCE

- Localistico Remote
Senior Software Engineer 2021 - Present
Backend Software Engineer 2019 - 2021

Currently working on the backend for an app used by brands like Orange and Starbucks to manage and track how their locations look across different mapping and local platforms, from Google Maps to Yelp. Lead the backend development team, mentor others, give demos, write and review technical documents. Defined, designed, implemented and rolled out several large features such as roles & permissions, promotion post campaigns, bulk updates and automatic review replies. Experience in fast-paced, high-intensity environments.

Stack: Ruby, Ruby on Rails, Python, PostgreSQL, Minitest, Heroku, Google Cloud, Docker, Kubernetes
- Tech Buzz Remote
Fullstack Software Engineer 2016 - 2019

Worked closely with the Founder to define and create a social media application. Used Ruby on Rails in pair with Ember.js to achieve a quick loading time and a fluid user experience. Took ownership of the codebase and successfully designed and developed features such as multi-author blogging, invites, and payments. Rolled out a Docker-based deployment environment.

Stack: Ruby, Ruby on Rails, JavaScript, Ember.js, HTML, CSS, PostgreSQL, RSpec, CircleCI, AWS, Docker
- Codahead Kraków, Poland
Software Engineer 2013 - 2016
 - Appetizeapp.com: Point of Sale & Ordering application. Involved in the development of multiple features related to integration with external systems. Fixed several bugs and improved code test coverage. Worked with international teams. Company acquired by SpotOn in 2021 for \$415 Million.
Stack: PHP, JavaScript, HTML, CSS, MySQL
 - Spinlister.com: Peer-to-peer bike rental platform. Improved code testability, refactored and maintained the legacy codebase. Designed and implemented multiple features such as messaging, reviews and notifications.
Stack: Ruby, Ruby on Rails, JavaScript, Backbone.js, HTML, CSS, PostgreSQL, RSpec, CircleCI, Heroku
 - Listables.com: Checklists application. Built a frontend Single Page Application using Ember.js framework. Reduced development time and costs by reusing the codebase to implement a hybrid mobile application for Apple and Android devices.
Stack: JavaScript, Ember.js, HTML, CSS, Apache Cordova

EDUCATION

- Tadeusz Kościuszko University of Technology Kraków, Poland
Master of Science in Applied Computer Science 2011 – 2013
- AGH University of Science and Technology Kraków, Poland
Bachelor of Science in Computer Science and Econometrics 2008 – 2011

PERSONAL PROJECTS

- Najnowsze.xyz: A lightweight, serverless Wykop client. Built to serve content fast without ads and user tracking.
- Aboutme GraphQL API: A microservice built to aggregate data from several platforms such as recently played tracks from Spotify, last posts from Instagram or jogged distance at Endomondo and summarize it as JSON API.
